

Still Waiting for Gigabit Fiber Internet? GigabitNow is the Solution!

Turnkey Solutions for the Planning, Design, Construction, Operation and Support of Gigabit Fiber to the Home Networks.

GigabitNow offers custom fiber Internet solutions for communities and businesses. GigabitNow can consult with you to determine what fiber network option is best suited for your site. From developing and constructing new FTTH plants, or refitting and operating existing networks, GigabitNow delivers.

Our design and construction team are industry leaders in the underground utility and site development markets with over 30 years experience. GigabitNow also manages daily operations and end-user support through our expert 24/7/365 technical support team. Let us show you how to bring true Gigabit fiber Internet speeds to your community.

GigabitNow is in the business of planning, building, connecting, operating and supporting fiber networks for communities across the country and our past experience proves it.

WHY GIGABITNOW?

GigabitNow has the expertise to design, construct, connect, operate and support fiber networks for cities, communities, or large multi-tenant buildings.

- One Company to deal with! We take care of everything from design, construction, fiber optic installation, management, and ongoing operations, including end-user billing and support.
- Planning, construction, management and operations of modern fiber plant and service is challenging, we've done it.
- Get the benefit of our experience in real world fiber plant construction and operations.
- True 1,000 Mbps (Gigabit) speeds, the bandwidth you need to support all your streaming devices and personal network.
- The 21st-century Internet requires fiber optic infrastructure and systems.

We are happy to talk to you more about GigabitNow solutions. We are based in Seattle, Washington but work with customers across the United States with new projects starting up all the time. Stop trying to figure out Gigabit Fiber, contact us at 1-866-748-8066 and let us make it easy.

DESIGN & BUILD

GigabitNow has been developing and operating fiber networks for years. We can design your fiber network and assist in the financial modeling to ensure your new network has a realistic financial plan with long term sustainability. We have expertise in a variety of fiber network architectures and outside plant deployments, as well as, nationally recognized certifications for the design and construction of fiber networks. We have a comprehensive understanding of utility construction and fiber plant development, as well as, the ability to effectively manage all phases of complex projects from start to finish. Many state and local governments, telephone, and data communication companies use our services including the Department of Defense.

OPERATIONS

Once we have designed, constructed your fiber network our field team will be on-site to make sure daily operations run smoothly and correctly. Our network engineers have experience with many switch and routing equipment manufacturers and are experts in network management and operations. GigabitNow engineers will put in place network controls and monitoring to ensure optimum reliability. Our network operations teams are prepared to handle any network, or facility event, ensuring your community's new investment in the future is safe and in optimal condition.

CONNECTIVITY & SUPPORT

We have been a leader in Internet access for residential and business Internet connectivity in the Pacific Northwest since 1994. Our strong relationships within the telecommunications industry and with backbone providers give us a unique opportunity to help your community get connected on the most reliable and least expensive connection to the Internet. We believe in supplying customers with fiber optic infrastructure and systems that are fast and reliable for the long-term. GigabitNow's 24/7/365 customer support has years of experience troubleshooting and assisting in the daily needs of end-users. In addition, our customer support and accounting teams will take care of all the billing and the processing of payments from users on the network making it easy for you to sit back and enjoy the gigabit speeds of your new fiber network.
