Placentia's New Fiber Network

Fiber Network Construction

SiFi Networks is the owner, operator, and builder of the new fiber network known as Placentia FiberCity®. The fiber optic network being installed for Placentia is being constructed with the most cutting-edge technology used today. Using a method called micro-trenching, the network will be installed city-wide; first through city streets, next into neighborhoods, and then right up to the curb of properties. While this is a multiple-year project it doesn't mean everyone has to wait to get connected. As sections of the new network are fully constructed, those areas will become available for service and SiFi Networks will release them for the next step: home installation.

Note: Portions of Placentia are already serviceable, and customers are using GigabitNow Internet today!

Home Installation

Residents who have ordered Internet from GigabitNow, the Internet Service Provider, can expect to be contacted by SiFi Networks to schedule an installation appointment once their home address becomes serviceable. During this appointment, SiFi Networks' installation teams will bring the fiber from the street to the resident's home and set up their home network. From there, the resident will be moved to the final step: Internet with GigabitNow.

Internet with GigabitNow

Following installation, GigabitNow will then be the resident's new Internet Service Provider. At GigabitNow, we supply ultrafast and reliable home Internet at affordable prices. There are no contracts, hidden fees, or setup charges. SiFi Networks selected GigabitNow as the Internet Service Provider on the Placentia FiberCity® Network based on our 32 years of experience and award winning 24/7 live US-based customer support. GigabitNow is excited for Placentia to experience the Internet how it is meant to be!
